Wayne County Community College District

WCCCD Forms Center

Enterprise forms, secure submissions, and request tracking

Proposed approach for discussion, October 2026

One framework, three requirements, IT pilot first

Internal forms portal

One SharePoint entry point to find, complete, and submit departmental forms. IT first, then HR and others.

Secure external submissions

Controlled intake of vendor and external files. RFPs need stronger controls than general file collection.

Request lifecycle tracking

Each request traced from submission through review, decision, fulfillment, and closure.

RFP submissions need more than an upload link

- **Verified vendor identity**
- **Enforced submission deadlines**
- **Timestamped receipts**
- **Bids sealed until authorized opening**
- **No vendor sees another’s files**

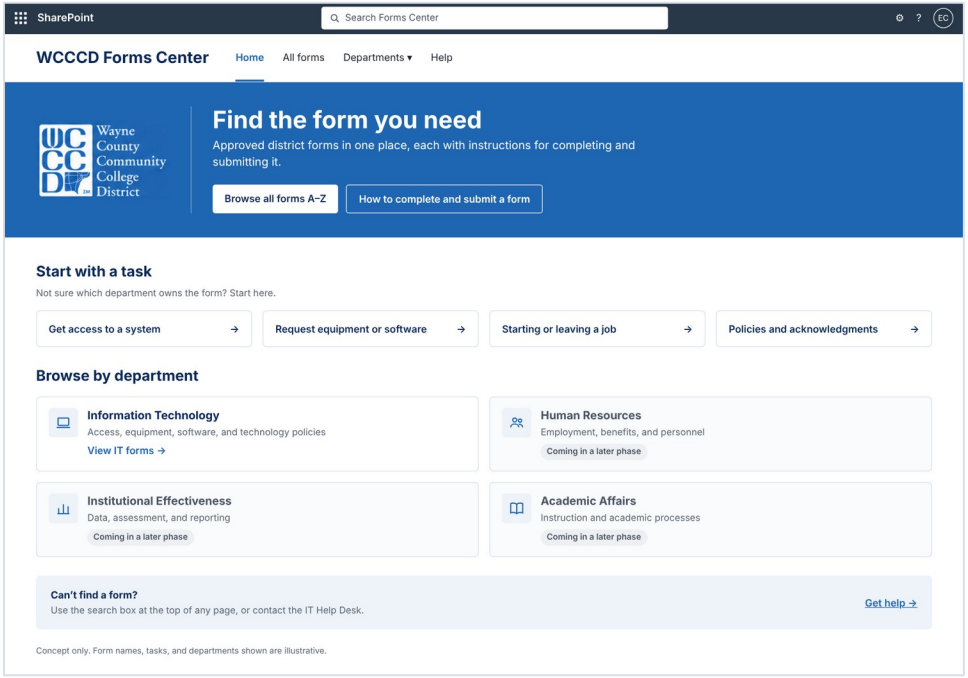

General file collection

Can use a simpler process where appropriate, with confidential handling and access limited to authorized staff.

Two paths

Build it into the Forms Center, or join MITN, Michigan’s no-cost bid network.

Find forms by search, task, or department

Concept. Content is illustrative.

Search

The SharePoint header search covers every form.

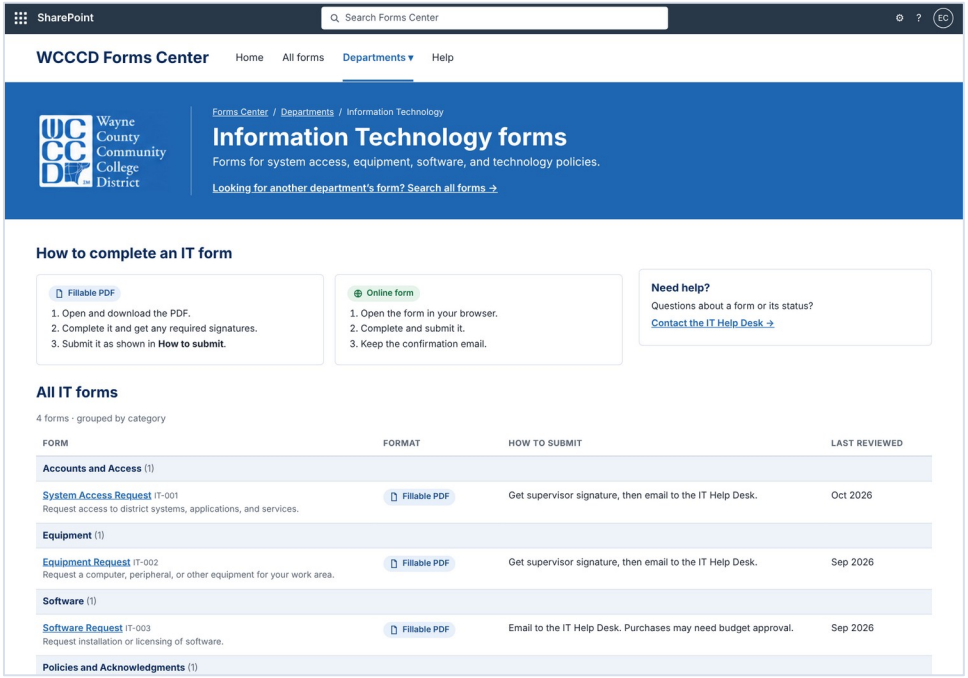

Start with a task

For people who don't know which department owns a form.

Browse by department

IT live in the pilot; others marked for a later phase.

Every form shows how to submit it

Concept. Form names, steps, and dates are illustrative.

Instructions first

Fillable PDF and online form steps, side by side.

One row per form

Format, how to submit, form ID, and last review date.

Grouped by category

Accounts and Access, Equipment, Software, Policies.

Standard SharePoint first, add-ons later

Standard SharePoint	Microsoft 365 tools	Optional, later
Communication site, one forms library with metadata, filtered views, Quick Links, header search	Microsoft Forms or Power Apps for online forms; Power Automate for routing and review reminders	PnP Modern Search for an in-page search box with filters, if usage shows the need

One library, many views. Adding a department means adding a page and tagging its forms, not rebuilding the site.

Four phases, starting with an IT pilot

1

Confirm

Use cases, IT forms inventory, standards, licensing review

2

Pilot IT

Fillable PDFs, IT page, one tracked workflow

3

Purchasing

RFP intake: build the module or join MITN

4

Expand

HR and other departments, owners, training

Hours, cost, and dates: see Decisions and Timeline.

Next steps

1. Confirm the overall direction with the CIO
2. Identify the IT forms and the first workflow for the pilot
3. Designate business owners for the three work areas

These decisions shape the detailed implementation plan and schedule.
